1984

THIS BOOKLET CONTAINS FORMS AND INSTRUCTIONS FOR COMPLETING
THE 1984 RCRA FACILITY ANNUAL HAZARDOUS WASTE REPORT.
A RESPONSE IS REQUIRED BY LAW.

Instructions for Completing the Facility (TSD) Annual Hazardous Waste Report

IMPORTANT: READ ALL INSTRUCTIONS CAREFULLY BEFORE COMPLETING THE ANNUAL HAZARDOUS WASTE REPORT FORM.

GENERAL INSTRUCTIONS

Photocopies will not be accepted. You must submit your completed report on the form provided. The IEPA requests that you also enclose one complete photocopy with your original and the IEPA suggests you make and retain a photocopy for your files.

Who Must File

Owners or operators of facilities that treated, stored, or disposed of federally regulated quantities of hazardous waste at any time during the 1984 calendar year must file an annual report with IEPA. The information requested in this report is required by law (Chapter 111 1/2, Sections 1004 and 1021(f)(2) of the Illinois Revised Statutes).

If you filed an Annual Report for calendar year 1983, and if your installation did not treat, store, or dispose of regulated quantities of hazardous waste at any time during the 1984 calendar year, you must still file page one (001) and the comments page of the annual report form to notify IEPA of your change to a non-regulated status.

If your installation generated or accumulated regulated quantities of hazardous waste (pursuant to Section 722.134) during the calendar year covered by this report but did not treat, store (1000 kg* for more than 90 days or 1000 kg* at the end of the calendar year), or dispose of any portion of that waste on-site, you must complete a Generator Report instead of this Facility Report.

You must complete both a Facility and Generator Report if your installation shipped hazardous waste off-site and also treated, stored (1000 kg* for more than 90 days or 1000 Kg* at the end of the calendar year), or disposed of hazardous waste on-site. (If you did not receive one, a copy of the Generator Report form may be obtained by calling (217) 782-6761.)

Facilities that beneficially use, reuse, or recycle hazardous wastes must complete and file a Facility Annual Report if the hazardous waste is a sludge or is listed in Subpart D of Section 721 (or contains one or more hazardous wastes listed in Subpart D) and is not a spent pickle liquor that is reused in wastewater treatment at a facility holding an NPDES (National Pollutant Discharge Elimination System) permit (See Section 721.106(a)(3)).

*substitute 1 kg. for acutely hazardous waste.

What Must Be Reported

All regulated quantities of hazardous waste that were treated or disposed of or placed in storage for 90 days or more between January 1 and December 31, 1984, must be reported by individual Generator on the Facility form. The total quantity of waste in storage at your facility for each waste stream as of December 31, 1984, must be reported, by storage method, in Section XVI.G. Handling Method. Storage of less than 1000 Kg* aggregate does not need to be reported, regardless of time stored. Storage for less than 90 days of any amount does not need to be reported, **except** that regulated quantities of waste placed in storage after October 1, 1984 and still in storage at the end of the calendar year must be reported.

Only wastes or portions of wastes that are regulated as either characteristic or listed hazardous wastes should be reported. The characteristic and listed hazardous wastes are identified in the Appendix at the end of this booklet. **Do not** report any wastes that are not regulated as hazardous under the Federal hazardous waste regulations, even if **manifested** (e.g., PCB's, asbestos, hazardous hospital waste by the Illinois definition, etc.).

If any or all of the waste handled by your facility was delisted (see Sections 720.120 and 720.122) at some time during the calendar year covered by this report, you must still report those wastes for the portion of the year in which they were regulated. Please indicate in the comment section the line numbers of any such wastes.

F. DENSITY

Density is defined for the purposes of this report as the weight of the waste (in pounds) divided by its volume in gallons.

Density = pounds of waste/gallons of waste

Example: the density of waste in a 55 gallon drum weighing 500 lbs. would be calculated by:

- (1) subtracting the weight of the container (45 lbs.) from 500 lbs. (the total weight of the containerized waste), equaling 455 lbs. of waste
- (2) dividing 455 lbs. by 55 gallons, which equals 8.3 lbs. per gallon
- (3) entering the density as 8.3

Note: Round off all densities to the nearest tenth.

Example:

XVI. WASTE IDENTIFICATION

A. LINE NO.	B. DESCRIPTION OF WASTE	C. USDOT Hazard Code	D. RCRA HAZARDOUS WASTE NO. (see instructions)	E. AMOUNT OF WASTE (gallons only)	F. DENSITY (lbs. / gal.)	G. HANDLING METHOD
0 0 0 1 63 66	Chlorinated Distillation Residues	1 5 67 68	K 0 1 6 K 0 1 8 69 72 73 76 K 0 1 9 K 0 2 0 77 80 81 84	5 7 5 0 0 0 85 93 94 96 132 134	8 . 3	

G. HANDLING METHOD

Enter a USEPA handling code for each waste line entry. Where several handling steps have occurred during the year, report only the handling code representing the waste's status at the end of the period the waste was at your facility. If a different handling code applies to portions of the same waste (e.g., part of the waste is stored on-site while the remainder was chemically fixed on-site), list the waste on two lines with the amount of waste that applies to each handling method. USEPA handling codes are given in the Table on the last page of these instructions.

Example:

XVI. WASTE IDENTIFICATION

A. LINE NO.	B. DESCRIPTION OF WASTE	C. USDOT Hazard Code	D. RCRA HAZARDOUS WASTE NO. (see instructions)	E. AMOUNT OF WASTE (gallons only)	F. DENSITY (lbs. / gal.)	G. HANDLING METHOD
0 0 0 1 63 66	Chlorinated Distillation Residues	1 5 67 68	K 0 1 6 K 0 1 8 69 72 73 76 K 0 1 9 K 0 2 0 77 80 81 84	5 7 5 0 0 0 85 93 94 96 132 134	8 . 3	T 0 1

Section XVIII. Comments

This page (or pages) may be used to clarify, explain, or continue any verbal (not numeric) entry. If used, enter a cross reference to the appropriate page number, section number, and line number.

Section XIX. Page Number

Enter the page number of each sheet (note that page 001 and 002 have already been completed on the form) in the lower right hand corner of each page. Number all pages consecutively for any additional sheets you needed to reproduce for this report.

GROUND-WATER MONITORING DATA

In accordance with Title 35, Part 725.194(a)(2)(B) and (C) and (b)(2), certain results of groundwater monitoring performed during 1984 must be submitted along with the Facility Annual Report. Information requirements are dependent upon whether a facility is conducting detection program monitoring or quality assessment monitoring.

If the facility is conducting detection program monitoring (725.192 and 725.193), the following are required:

- (1) Concentration or values of indicator parameters listed in 725.192(b)(3) for each monitoring well.
- (2) Evaluations of these parameters under 725.193(b) (results of t-tests).
- (3) Significant differences (if any) from initial background found in upgradient wells, in accordance with 725.193(c)(1).

Characteristics of Hazardous Wastes

(Section 721, Subpart C)

and

Lists of Hazardous Waste

(Section 721, Subpart D)

SUBPART C: CHARACTERISTICS OF HAZARDOUS WASTE

Section 721.120 General

- a) A solid waste, as defined in Section 721.102, which is not excluded from regulation as a hazardous waste under Section 721.104(b), is a hazardous waste if it exhibits any of the characteristics identified in this Subpart.

Comment: Section 722.111 sets forth the generator's responsibility to determine whether his waste exhibits one or more of the characteristics identified in this Subpart.

- b) A hazardous waste which is identified by a characteristic in this Subpart, but is not listed as a hazardous waste in Subpart D, is assigned the EPA Hazardous Waste Number set forth in the respective characteristic in this Subpart. This number must be used in complying with the notification requirements of Section 3010 of the Act and certain recordkeeping and reporting requirements under Parts 722 through 725 and 40 CFR Part 122.
- c) For purposes of this Subpart, a sample obtained using any of the applicable sampling methods specified in Appendix I is a representative sample within the meaning of Part 720

Comment: Since the Appendix I sampling methods are not being formally adopted, a person who desires to employ an alternative sampling method is not required to demonstrate the equivalency of his method under the procedures set forth in Section 720.121.

Source: Amended at 6 Ill. Reg. 4828, effective as noted in Section 700.106.

Section 721.121 Characteristic of Ignitability

a) A solid waste exhibits the characteristic of ignitability if a representative sample of the waste has any of the following properties:

- 1) It is a liquid, other than an aqueous solution containing less than 24 percent alcohol by volume, and has a flash point less than 60°C (140°F), as determined by Pensky-Martens Closed Cup Tester, using the test method specified in the American Society of Testing Materials (ASTM) Standard D-93-79 or D-93-80 (incorporated by reference, see Section 720.111), or a Setaflash Closed Cup Tester, using the test method specified in ASTM Standard D-3278-78 (incorporated by reference, see Section 720.111), or as determined by an equivalent test method approved by the Board (Section 720.120).
- 2) It is not a liquid and is capable, under standard temperature and pressure, of causing fire through friction, absorption of moisture or spontaneous chemical changes and, when ignited, burns so vigorously and persistently that it creates a hazard.
- 3) It is an ignitable compressed gas as defined in 49 CFR 173.300 and as determined by the test methods described in that regulation or equivalent test methods approved by the Board (Section 720.120).
- 4) It is an oxidizer as defined in 49 CFR 173.151.

b) A solid waste that exhibits the characteristic of ignitability, but is not listed as a hazardous waste in Subpart D, has the EPA Hazardous Waste Number of D001.

Source: Amended at 6 Ill. Reg. 4828, effective as noted in Section 700.106.

Section 721.122 Characteristic of Corrosivity

a) A solid waste exhibits the characteristic of corrosivity if a representative sample of the waste has either of the following properties:

- 1) It is aqueous and has a pH less than or equal to 2 or greater than or equal to 12.5, as determined by a pH meter using either an EPA test method or an equivalent test method (Section 720.121). The EPA test method for pH is specified as Method 5.2 in "Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods" (incorporated by reference, see Section 720.111).
- 2) It is a liquid and corrodes steel (SAE 1020) at a rate greater than 6.35 mm (0.250 inch) per year at a test temperature of 55°C (130°F) as determined by the test method specified in NACE (National Association of Corrosion Engineers) Standard TM-01-69 as standardized in "Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods" (incorporated by reference, see Section 720.111) or an equivalent test method (Section 720.121).

b) A solid waste that exhibits the characteristic of corrosivity, but is not listed as a hazardous waste in Subpart D, has the EPA Hazardous Waste Number of D002.

Source: Amended at 6 Ill. Reg. 4828, effective as noted in Section 700.106.

Section 721.123 Characteristic of Reactivity

a) A solid waste exhibits the characteristic of reactivity if a representative sample of the waste has any of the following properties:

- 1) It is normally unstable and readily undergoes violent change without detonating.
- 2) It reacts violently with water.
- 3) It forms potentially explosive mixtures with water.
- 4) When mixed with water, it generates toxic gases, vapors or fumes in a quantity sufficient to present a danger to human health or the environment.
- 5) It is a cyanide or sulfide bearing waste which, when exposed to pH conditions between 2 and 12.5 can generate toxic gases, vapors or fumes in a quantity sufficient to present a danger to human health or the environment.
- 6) It is capable of detonation or explosive reaction if it is subjected to a strong initiating source or if heated under confinement.
- 7) It is readily capable of detonation or explosive decomposition or reaction at standard temperature and pressure.
- 8) It is a forbidden explosive as defined in 49 CFR 173.51, or a Class A explosive as defined in 49 CFR 173.53 or a Class B explosive as defined in 49 CFR 173.88.

b) A solid waste that exhibits the characteristic of reactivity, but is not listed as a hazardous waste in Subpart D, has the EPA Hazardous Waste Number of D003.

Source: Amended at 6 Ill. Reg. 4828, effective as noted in Section 700.106.

Section 721.124 Characteristic of EP Toxicity

a) A solid waste exhibits the characteristic of EP toxicity if, using the test methods described in Appendix II or equivalent methods (Section 720.121), the extract from a representative sample of the waste contains any of the contaminants listed in Table I at a concentration equal to or greater than the respective value given in that Table. Where the waste contains less than 0.5 percent filterable solids, the waste itself, after filtering, is considered to be the extract for the purposes of this Section.

b) A solid waste that exhibits the characteristic of EP toxicity, but is not listed as a hazardous waste in Subpart D, has the EPA Hazardous Waste Number specified in Table I which corresponds to the toxic contaminant causing it to be hazardous.

SUBPART D: LISTS OF HAZARDOUS WASTE

Section 721.130 General

- A solid waste is a hazardous waste if it is listed in this Subpart, unless it has been excluded from this list under Sections 720.120 and 720.122.
- The basis for listing the classes or types of wastes listed in this Subpart is indicated by employing one or more of the Hazard Codes:

Ignitable Waste	(I)
Corrosive Waste	(C)
Reactive Waste	(R)
EP Toxic Waste	(E)
Acute Hazardous Waste	(H)
Toxic Waste	(T)

Appendix VII identifies the constituent which caused the Administrator to list the waste as an EP Toxic Waste (E) or Toxic Waste (T) in Sections 721.131 and 721.132.

- Each hazardous waste listed in this Subpart is assigned an EPA Hazardous Waste Number which precedes the name of the waste. This number must be used in complying with the notification requirements of Section 3010 of the Act and certain recordkeeping and reporting requirements under Parts 722 through 725 and 40 CFR Part 122.
- The following hazardous wastes listed in Section 721.131 or 721.132 are subject to the exclusion limits for acutely hazardous wastes established in Section 721.105:

Section 721.133 Discarded Commercial Chemical Products, Off-Specification Species, Containers and Spill Residues

The following materials or items are hazardous wastes if and when they are discarded or intended to be discarded:

- a) Any commercial chemical product, or manufacturing chemical intermediate having the generic name listed in paragraphs (e) or (f).
- b) Any off-specification commercial chemical product or manufacturing chemical intermediate which, if it met specifications, would have the generic name listed in paragraphs (e) or (f).
- c) Any container or inner liner removed from a container that has been used to hold any commercial chemical product or manufacturing chemical intermediate having the generic names listed in paragraph (e), or any container or inner liner removed from a container that has been used to hold any off-specification chemical product and manufacturing chemical intermediate which, if it met specifications, would have the generic name listed in paragraph (e) unless:
 - 1) The container or inner liner has been triple rinsed using a solvent capable of removing the commercial chemical product or manufacturing chemical intermediate;
 - 2) The container or inner liner has been cleansed by another method that has been shown in the scientific literature, or by tests conducted by the generator, to achieve equivalent removal; or
 - 3) In the case of a container, the inner liner that prevented contact of the commercial chemical product or manufacturing chemical intermediate with the container, has been removed.
- d) Any residue or contaminated soil, water or other debris resulting from the cleanup of a spill, into or on any land or water of any commercial chemical product or manufacturing chemical intermediate having the generic name listed in paragraph (e) or (f), or any residue or contaminated soil, water or other debris resulting from the cleanup of a spill, into or on any land or water, of any off-specification chemical product or manufacturing chemical intermediate which, if it met specifications, would have the generic name listed in paragraph (e) or (f).

Comment: The phrase "commercial chemical product or manufacturing chemical intermediate having the generic name listed in ..." refers to a chemical substance which is manufactured or formulated for commercial or manufacturing use which consists of the commercially pure grade of the chemical, any technical grades of the chemical that are produced or marketed, and all formulations in which the chemical is the sole active ingredient. It does not refer to a material, such as a manufacturing process waste, that contains any of the substances listed in paragraphs (e) or (f). Where a manufacturing process waste is deemed to be a hazardous waste because it contains a substance listed in paragraphs (e) or (f), such waste will be listed in either Sections 721.131 or 721.132 or will be identified as a hazardous waste by the characteristics set forth in Subpart C of this Part.

- e) The commercial chemical products, manufacturing chemical intermediates or off-specification commercial chemical products or manufacturing chemical intermediates referred to in paragraphs (a) through (d) of this Section, are identified as acute hazardous waste (H) and are subject to the small quantity exclusion defined in Section 721.105(e).

Comment For the convenience of the regulated community the primary hazardous properties of these materials have been indicated by the letters T (Toxicity), and R (Reactivity). Absence of a letter indicates that the compound only is listed for acute toxicity. These wastes and their corresponding EPA Hazardous Waste Numbers are:

Illinois Environmental Protection Agency Hazardous Waste Generator Annual Report for 1984

**This Booklet Contains Forms and Instructions for Completing
the 1984 RCRA Generator Annual Hazardous Waste Report.
A Response is Required by Law.**

Instructions for Completing the Generator Annual Hazardous Waste Report

IMPORTANT: READ ALL INSTRUCTIONS CAREFULLY BEFORE COMPLETING THE ANNUAL HAZARDOUS WASTE REPORT FORM.

GENERAL INSTRUCTIONS

PHOTOCOPIES will not be accepted. You must submit your completed report on the form provided. The IEPA requests that you also enclose one complete photocopy with your original and the IEPA suggests you make and retain a photocopy for your files.

Who Must File

Any installation (generator) that generated and shipped off-site (to a facility they do not own or operate) regulated quantities of hazardous waste at any time during the 1984 calendar year must file an annual report with IEPA. The information requested in this report is required by law (Chapter 111 1/2, Sections 1004 and 1021(f)(2) of the Illinois Revised Statutes).

If you filed an Annual Report for calendar year 1983, and if your installation did not generate or otherwise handle regulated quantities of hazardous waste at any time during the 1984 calendar year, you must still file page one and the comments page of the annual report form to notify IEPA of your change to a non-regulated status.

Generators that treated, stored, or disposed of all of the hazardous waste generated during the 1984 calendar year on site must submit a Facility Report instead of a generator report (call 217/782-6761 for a copy of the facility report).

If portions of the hazardous waste generated at your installation during the calendar year covered by this report were shipped off-site to a facility not owned or operated by your corporation and other portions were treated, stored (1000 Kg* for more than 90 days or placed in storage after October 1, 1984 and still in storage at the end of the calendar year), or disposed of on-site, you must complete both a Generator and a Facility Report. (If you did not receive one, a copy of the Facility Report form may be obtained by calling 217/782-6761.)

Generators that shipped all of their waste off-site to a facility they own or operate are not required to complete the Generator Annual Report. However, the off-site facility must complete a Facility Annual Report.

Generators that transport or store hazardous wastes prior to beneficial use, reuse, or recycling must complete and file an annual report if the hazardous waste is a sludge, or is listed in Subpart D of Section 721 (or contains one or more hazardous wastes listed in Subpart D) and is not a spent pickle liquor that is reused in wastewater treatment at a facility holding an NPDES (National Pollutant Discharge Elimination System) permit (See Section 721.106(a)(3)).

What Must Be Reported

All regulated quantities of hazardous waste that were shipped off-site between January 1 and December 31, 1984, must be reported on the generator form.

Any waste total aggregate of 1000 kg* or greater that was generated at your installation and treated, stored (for more than 90 days in quantities of 1000 kg* or greater or placed in storage after October 1, 1984 and still in storage at the end of the calendar year), or disposed of on-site must be reported on the TSD (Facility Report) form, not the Generator form (call 217/782-6761 for form).

*substitute 1 kg for acutely hazardous waste

Only wastes or portions of waste shipments that are regulated as either characteristic or listed hazardous wastes should be reported. The characteristic and listed wastes are identified in the appendix at the back of this booklet. Do not report any wastes that are not regulated as hazardous under the Federal hazardous waste regulations, even if manifested (e.g., PCB's, asbestos, hazardous hospital waste by the Illinois definition, etc.).

If any or all of the waste(s) generated at your installation were delisted (see Sections 720.120 and 720.122) at some time during the reporting year, you must still report those wastes for the portion of the year in which they were regulated. Please indicate in the comment section the line numbers of any such wastes.

Section I. NON-REGULATED STATUS

Complete this section, on the attached forms, only if your installation did not generate and ship off-site regulated quantities of hazardous waste at any time during the calendar year covered by this report (1984).

Circle the one code that best describes your status during the entire calendar year (January 1, 1984 — December 31, 1984) covered by this report, as follows.

- NON HANDLER — did not handle hazardous waste in any quantity in the calendar year covered by this report. 1
- SMALL QUANTITY GENERATOR — Did not generate and ship more than 1000 kg. of hazardous waste (or 1 kg. of acutely hazardous waste) in any single month or accumulate more than 1000 kg. of hazardous waste (or 1 kg. of acutely hazardous waste) on-site at any time during the calendar year covered by this report (Section 721.105). 2
- EXEMPT — All wastes were generated in farming operations (Section 722.151) or exempt pursuant to (Section 721.104). 3
- BENEFICIAL USE — All hazardous waste generated was beneficially used, reused, or recycled in accordance with (Section 721.102) and (Section 721.106(a) — characteristic wastes or spent pickle liquor). Note that installations subject to (Section 721.106(b)) will be regulated in the same manner as any hazardous waste generator. 4
- CLOSED — Installation was closed prior to January 1, 1984 and no hazardous waste was shipped off-site in calendar year 1984. 5
- Indicate by circling the appropriate numeric code whether this non-regulated status is expected to apply to your installation only for 1984, permanently, or other. Please attach the Comment page of the annual report form and explain your status in the comment section.

If you completed Section I, complete Sections III through IX and return this form to the Illinois EPA (address on page 6). Leave Form 50 and 60 blank.

Section II. REGULATED STATUS

This report covers only hazardous waste shipped during the calendar year 1984. 'Installation' means a single site where hazardous waste was generated. 'Facility' means a single site where hazardous waste was treated, stored, or disposed of. Please print or type all information.

Section III. Generator's USEPA Identification (I.D.) Number

Enter your installation's 12 digit Federal Number. Hint: Check one of the Illinois manifests used in 1984 to ship your wastes as these I.D. numbers should be found on those copies.

Section IV. Generator's Illinois EPA Identification (I.D.) Number

Enter your installation's 10 digit State Number.

Section V. Name of Installation

Enter the complete name of your installation.

Section VI. Installation Mailing Address

Enter your installation's mailing address.

Section VII. Location of Installation

If your location address is different than the mailing address, enter the location address of your installation. If mailing address is a Post Office Box, the location must be entered.

Section VIII. Installation Contact

Enter the name (last and first) and telephone number of the person who may be contacted regarding information contained in this report.

Section IX. Certification

The owner or operator of the installation or his or her authorized representative must sign and date the certification where indicated. The printed or typed name and title of the person signing the report must also be included where indicated. This Agency is authorized to require this information under Illinois Revised Statutes, 1981,

Chapter 111-1/2, Sections 1004 and 1021(f)(2). Disclosure of this information is required. Failure to do so may result in a civil penalty up to \$25,000 for each day the failure continues, a fine up to \$1,000,000 and imprisonment up to 5 years.

Enter the total number of pages of this entire report in the blank space after "Page 001 of ."

Note: A separate sheet must be used for each facility to which waste was shipped, or if the number of waste streams shipped to a particular facility exceeds 10. Reproduce additional sheets as necessary.

Section X. Generator's USEPA I.D. Number

Enter your 12 digit USEPA identification number here.

Section XI. Generator's Illinois EPA I.D. Number

Enter your 10 digit Illinois EPA identification number.

Section XII. Facility's USEPA I.D. Number

B. DESCRIPTION OF WASTE (USEPA and RCRA are Synonymous)

For hazardous wastes that are listed under Section 721, Subpart D (see Appendix), enter the waste name, abbreviated if necessary. Where mixtures of listed wastes were shipped, enter the description you believe best describes the waste.

For hazardous waste identified by characteristic (i.e., ignitable, corrosive, reactive, or EP toxic), under Section 721, Subpart C, please include the following: (1) the description from the list of characteristics in the Appendix that you believe best describes the waste; (2) the specific manufacturing or other process generating the waste; and (3) the chemical or generic chemical name of the waste, if known.

Example:

XV. WASTE IDENTIFICATION

If the waste described has been shipped under more than one US DOT hazard class, use the one code most descriptive for the shipment as a whole. Definitions of US DOT hazard class can be found in 49 CFR Part 173.

Example:

D. RCRA (USEPA) HAZARDOUS WASTE NUMBER

For listed wastes, enter the four digit USEPA Hazardous Waste Number from Section 721, Subpart D (see Appendix) that identifies the waste. For unlisted wastes that exhibit hazardous characteristics, enter the four digit USEPA Hazardous Waste Number from Section 721, Subpart C (see Appendix) that is applicable to the waste.

For a mixture of more than one listed or unlisted waste, enter all of the most relevant USEPA Hazardous Waste Numbers (up to four). Four spaces are provided for this on each waste line. Generators who ship lab packs are currently required to list the hazardous waste number for the major constituents of the pack (up to four) and the total pack volume in gallons.

Example:

XV. WASTE IDENTIFICATION

A. LINE NO.	B. DESCRIPTION OF WASTE	C. USDOT Hazard Code	D. RCRA HAZARDOUS WASTE NO. (see instructions)	E. AMOUNT OF WASTE (gallons only)	F. DENSITY (lbs. / gal.)
0 0 0 1 63 66	Chlorinated Distillation Residues	1 5 67 68	K 1 0 1 1 6 K 1 0 1 1 8 69 72 73 76 K 1 0 1 1 9 K 1 0 1 2 0 77 80 81 84	85 93 94 96	

E. AMOUNT OF WASTE

Enter the total volume in **gallons** of the waste stream described on this line that was shipped to the facility identified in Section XII during the 1984 reporting year. "Right justify" your entries. (This means the number you enter in the boxes should be put in the boxes as far to the right as possible.) To convert cubic yards to gallons multiply the number of cubic yards by 202 (e.g., 15 cu. yds. x 202 = 3030 gallons).

Example:

XV. WASTE IDENTIFICATION

A. LINE NO.	B. DESCRIPTION OF WASTE	C. USDOT Hazard Code	D. RCRA HAZARDOUS WASTE NO. (see instructions)	E. AMOUNT OF WASTE (gallons only)	F. DENSITY (lbs. / gal.)
0 0 0 1 63 66	Chlorinated Distillation Residues	1 5 67 68	K 1 0 1 1 6 K 1 0 1 1 8 69 72 73 76 K 1 0 1 1 9 K 1 0 1 2 0 77 80 81 84	1 1 5 7 5 0 0 0 85 93 94 96	

F. DENSITY OF WASTE

Density is defined for the purpose of this report as the weight of the waste in pounds divided by the volume in gallons. (Density = weight/volume).

Example: What is the density of a 55 gallon drum of waste solvent that weighs 500 lbs?

The empty drum was weighed and found to weigh 45 lbs. The weight of a full drum minus the weight of an empty drum (500 lbs. - 45 lbs.) = 455 lbs. This quantity is divided by the number of gallons (455/55) = 8.3 lbs./gal. Thus, 8.3 would be entered for this waste in column F. Round off all densities to the nearest tenth of a lb/gal.

Example:

Characteristics of Hazardous Wastes

(Section 721, Subpart C)

and

Lists of Hazardous Waste

(Section 721, Subpart D)

SUBPART C: CHARACTERISTICS OF HAZARDOUS WASTE

Section 721.120 General

- a) A solid waste, as defined in Section 721.102, which is not excluded from regulation as a hazardous waste under Section 721.104(b), is a hazardous waste if it exhibits any of the characteristics identified in this Subpart.

Comment: Section 722.111 sets forth the generator's responsibility to determine whether his waste exhibits one or more of the characteristics identified in this Subpart.

- b) A hazardous waste which is identified by a characteristic in this Subpart, but is not listed as a hazardous waste in Subpart D, is assigned the EPA Hazardous Waste Number set forth in the respective characteristic in this Subpart. This number must be used in complying with the notification requirements of Section 3010 of the Act and certain recordkeeping and reporting requirements under Parts 722 through 725 and 40 CFR Part 122.
- c) For purposes of this Subpart, a sample obtained using any of the applicable sampling methods specified in Appendix I is a representative sample within the meaning of Part 720.

Comment: Since the Appendix I sampling methods are not being formally adopted, a person who desires to employ an alternative sampling method is not required to demonstrate the equivalency of his method under the procedures set forth in Section 720.121.

Source: Amended at 6 Ill. Reg. 4828, effective as noted in Section 700.106.

Section 721.121 Characteristic of Ignitability

a) A solid waste exhibits the characteristic of ignitability if a representative sample of the waste has any of the following properties:

- 1) It is a liquid, other than an aqueous solution containing less than 24 percent alcohol by volume, and has a flash point less than 60°C (140°F), as determined by Pensky-Martens Closed Cup Tester, using the test method specified in the American Society of Testing Materials (ASTM) Standard D-93-79 or D-93-80 (incorporated by reference, see Section 720.111), or a Setaflash Closed Cup Tester, using the test method specified in ASTM Standard D-3278-78 (incorporated by reference, see Section 720.111), or as determined by an equivalent test method approved by the Board (Section 720.120).
- 2) It is not a liquid and is capable, under standard temperature and pressure, of causing fire through friction, absorption of moisture or spontaneous chemical changes and, when ignited, burns so vigorously and persistently that it creates a hazard.
- 3) It is an ignitable compressed gas as defined in 49 CFR 173.300 and as determined by the test methods described in that regulation or equivalent test methods approved by the Board (Section 720.120).
- 4) It is an oxidizer as defined in 49 CFR 173.151.

b) A solid waste that exhibits the characteristic of ignitability, but is not listed as a hazardous waste in Subpart D, has the EPA Hazardous Waste Number of D001.

Source: Amended at 6 Ill. Reg. 4828, effective as noted in Section 700.106.

Section 721.122 Characteristic of Corrosivity

a) A solid waste exhibits the characteristic of corrosivity if a representative sample of the waste has either of the following properties:

- 1) It is aqueous and has a pH less than or equal to 2 or greater than or equal to 12.5, as determined by a pH meter using either an EPA test method or an equivalent test method (Section 720.121). The EPA test method for pH is specified as Method 5.2 in "Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods" (incorporated by reference, see Section 720.111).
- 2) It is a liquid and corrodes steel (SAE 1020) at a rate greater than 6.35 mm (0.250 inch) per year at a test temperature of 55°C (130°F) as determined by the test method specified in NACE (National Association of Corrosion Engineers) Standard TM-01-69 as standardized in "Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods" (incorporated by reference, see Section 720.111) or an equivalent test method (Section 720.121).

b) A solid waste that exhibits the characteristic of corrosivity, but is not listed as a hazardous waste in Subpart D, has the EPA Hazardous Waste Number of D002.

Source: Amended at 6 Ill. Reg. 4828, effective as noted in Section 700.106.

Section 721.123 Characteristic of Reactivity

a) A solid waste exhibits the characteristic of reactivity if a representative sample of the waste has any of the following properties:

- 1) It is normally unstable and readily undergoes violent change without detonating.
- 2) It reacts violently with water.
- 3) It forms potentially explosive mixtures with water.
- 4) When mixed with water, it generates toxic gases, vapors or fumes in a quantity sufficient to present a danger to human health or the environment.
- 5) It is a cyanide or sulfide bearing waste which, when exposed to pH conditions between 2 and 12.5 can generate toxic gases, vapors or fumes in a quantity sufficient to present a danger to human health or the environment.
- 6) It is capable of detonation or explosive reaction if it is subjected to a strong initiating source or if heated under confinement.
- 7) It is readily capable of detonation or explosive decomposition or reaction at standard temperature and pressure.
- 8) It is a forbidden explosive as defined in 49 CFR 173.51, or a Class A explosive as defined in 49 CFR 173.53 or a Class B explosive as defined in 49 CFR 173.88.

b) A solid waste that exhibits the characteristic of reactivity, but is not listed as a hazardous waste in Subpart D, has the EPA Hazardous Waste Number of D003.

Source: Amended at 6 Ill. Reg. 4828, effective as noted in Section 700.106.

Section 721.124 Characteristic of EP Toxicity

a) A solid waste exhibits the characteristic of EP toxicity if, using the test methods described in Appendix II or equivalent methods (Section 720.121), the extract from a representative sample of the waste contains any of the contaminants listed in Table I at a concentration equal to or greater than the respective value given in that Table. Where the waste contains less than 0.5 percent filterable solids, the waste itself, after filtering, is considered to be the extract for the purposes of this Section.

b) A solid waste that exhibits the characteristic of EP toxicity, but is not listed as a hazardous waste in Subpart D, has the EPA Hazardous Waste Number specified in Table I which corresponds to the toxic contaminant causing it to be hazardous.

Section 721.133 Discarded Commercial Chemical Products, Off-Specification Species, Containers and Spill Residues

The following materials or items are hazardous wastes if and when they are discarded or intended to be discarded:

- a) Any commercial chemical product, or manufacturing chemical intermediate having the generic name listed in paragraphs (e) or (f).
- b) Any off-specification commercial chemical product or manufacturing chemical intermediate which, if it met specifications, would have the generic name listed in paragraphs (e) or (f).
- c) Any container or inner liner removed from a container that has been used to hold any commercial chemical product or manufacturing chemical intermediate having the generic names listed in paragraph (e), or any container or inner liner removed from a container that has been used to hold any off-specification chemical product and manufacturing chemical intermediate which, if it met specifications, would have the generic name listed in paragraph (e) unless:
 - 1) The container or inner liner has been triple rinsed using a solvent capable of removing the commercial chemical product or manufacturing chemical intermediate;
 - 2) The container or inner liner has been cleansed by another method that has been shown in the scientific literature, or by tests conducted by the generator, to achieve equivalent removal; or
 - 3) In the case of a container, the inner liner that prevented contact of the commercial chemical product or manufacturing chemical intermediate with the container, has been removed.
- d) Any residue or contaminated soil, water or other debris resulting from the cleanup of a spill, into or on any land or water of any commercial chemical product or manufacturing chemical intermediate having the generic name listed in paragraph (e) or (f), or any residue or contaminated soil, water or other debris resulting from the cleanup of a spill, into or on any land or water, of any off-specification chemical product or manufacturing chemical intermediate which, if it met specifications, would have the generic name listed in paragraph (e) or (f).

Comment: The phrase "commercial chemical product or manufacturing chemical intermediate having the generic name listed in ..." refers to a chemical substance which is manufactured or formulated for commercial or manufacturing use which consists of the commercially pure grade of the chemical, any technical grades of the chemical that are produced or marketed, and all formulations in which the chemical is the sole active ingredient. It does not refer to a material, such as a manufacturing process waste, that contains any of the substances listed in paragraphs (e) or (f). Where a manufacturing process waste is deemed to be a hazardous waste because it contains a substance listed in paragraphs (e) or (f), such waste will be listed in either Sections 721.131 or 721.132 or will be identified as a hazardous waste by the characteristics set forth in Subpart C of this Part.

- e) The commercial chemical products, manufacturing chemical intermediates or off-specification commercial chemical products or manufacturing chemical intermediates referred to in paragraphs (a) through (d) of this Section, are identified as acute hazardous waste (H) and are subject to the small quantity exclusion defined in Section 721.105(e).

Comment: For the convenience of the regulated community the primary hazardous properties of these materials have been indicated by the letters T (Toxicity), and R (Reactivity). Absence of a letter indicates that the compound only is listed for acute toxicity. These wastes and their corresponding EPA Hazardous Waste Numbers are:
